

Figure 1. A schematic diagram illustrating the experimental design. The figure shows two parallel horizontal timelines representing the duration of the study. The top timeline is labeled "Participant 1" and the bottom timeline is labeled "Participant 2". Both timelines start at a point labeled "Baseline". Following baseline, there are three distinct phases indicated by brackets above each timeline: "Phase 1", "Phase 2", and "Phase 3". In Phase 1, both participants receive a treatment labeled "T1". In Phase 2, they receive "T2". In Phase 3, they receive "T3". Arrows indicate the progression from one phase to the next. Below the timelines, there are labels for specific time points or events: "Time Point 1" corresponds to the end of Phase 1; "Time Point 2" corresponds to the end of Phase 2; and "Time Point 3" corresponds to the end of Phase 3. The entire sequence is enclosed in a rectangular box.
